

Alfatriam 80/400

Composition:

Each tablet contains:
80 mg trimethoprim
400 mg sulfadiazine.

Action:

Synergetic antibacterial combination, active against most Gram-positive and Gram-negative bacteria, such as Streptococcus, Staphylococcus, E. coli, Pasteurella, Salmonella, Bordetella, Klebsiella, Shigella, Proteus.
Advantages: bactericidal action, almost no resistance, non-toxic, good distribution throughout the body, good tissue and barrier penetration.

Indications:

All primary and secondary bacterial infections, such as respiratory infections, gastro-intestinal, genital, urinary infections, eye/ear and skin infections, wound infections, post-operative infections, etc.

Administration/dosage:

Orally:

Dogs 2.5 mg trimethoprim and 12.5 mg sulfadiazine per kg b.w., twice daily, during 5-7 days; in case of severe skin infections prolonged treatment for 5-6 weeks.

Contra-Indications:

Severe impairment of renal or hepatic systems.

Side-effects:

Septic polyarthritis and keratoconjunctivitis sicca.

Conservation:

At room temperature (15-25°C), dry, and protected from light.

Warning:

Do not administer to dogs weighing less than 8 kg.

Presentation:

Bottles of 500 or 1000 tablets.
