

Amoxicillin 400 mg

Composition:

Each tablet contains:
400 mg amoxicillin base (as trihydrate)

Action:

Amoxicillin is a semi-synthetic benzylpenicillin active against Gram-positive and Gram-negative germs. Amoxicillin is recommended for oral administration because of its resistance to acidic conditions and good resorption from the stomach and the intestines.

Indications:

Gastro-intestinal infections (prevention and treatment), e.g. E. coli, Clostridium perfringens, Salmonella; infections of the respiratory and urinary systems, of the uterus; secondary infections in case of viral infections, septicemia, polyarthritis.

Administration/dosage:

Orally:

Dogs: 5-10 mg amoxicillin per kg b.w., twice daily, during minimal 5 days.

Contra-Indications:

Hypersensitivity to benzylpenicillins.
Do not use on rodents.

Warning:

Do not use in dogs weighing less than 10 kg.

Conservation:

At room temperature (15-25°C), dry and protected from light.

Presentation:

Bottles of 500.
