

Ampicillin 400 mg

Composition:

Each tablet contains:
400 mg ampicillin (as trihydrate)

Action:

Ampicillin is a synthetic benzylpenicillin active against Gram-positive and -negative bacteria. Ampicillin is recommended for oral administration because of its resistance to acidic conditions and its good resorption from the stomach and the intestines.

Indications:

Gastro-intestinal infections (prevention and treatment), e.g. E. coli, Clostridium perfringens, Salmonella; respiratory and urinary infections, uterus infections, secondary infections in case of viral infections, septicemia, polyarthritis and skin infections.

Administration/dosage:

Orally:

Dogs and Cats: 10-33 mg ampicillin per kg b.w, twice daily, during minimal 5 days; respiratory infections: 10-14 days.

Calves, piglets, lambs: 10-15 mg ampicillin per kg b.w., twice daily during 5 days.

Contra-Indications:

Hypersensitivity to benzylpenicillins.

Advised withdrawal times:

meat : 28 days.

Warning:

Do not combine with bacteriostatic medicines

Do not use in cats weighing less than 5 kg

Conservation:

At room temperature (15-25°C), dry and protected from light.

Presentation:

Bottles of 500.
