

Neocort

Composition:

Each ml of suspension contains:

3 mg neomycin sulphate

5 mg prednisolone acetate.

Properties:

Neomycin belongs to the aminoglycoside group of antibiotics. It has a bactericidal action against Gram-positive and Gram-negative bacteria involved in eye and ear infections. It has no activity against *Pseudomonas aeruginosa*.

Prednisolone is a synthetic glucocorticosteroid with antiphlogistic and anti-allergic properties.

Indications:

Eyes: inflammation of the anterior chamber, especially when bacterial infections are involved. Such conditions include:

keratoconjunctivitis, allergic conjunctivitis, sclerokeratitis, episcleritis, non-specific superficial keratitis, deep keratitis, post-operative and post-traumatic uveitis and post-operative keratitis.

Ears: otitis externa (purulent and non-purulent), secondary otitis externa following parasitic infestation.

Dosage and administration:

Eyes: 1 - 2 drops, three to six times per day.

Ears: 2 - 6 drops, two to three times per day.

Advised withdrawal times:

Not applicable.

Contra-indications:

Not known.

Side-effects:

Not known.

Warnings:

Not known.

Conservation:

Cool (8-15°C), protected from light.

Presentation:

Dropper bottle of 5 ml.
