

Neodoser

Composition:

Each ml solution contains:

50 mg neomycin sulphate

0,25 mg scopolamine methylbromide

Action:

Neomycin is an ideal antibiotic for intestinal use, with a bactericidal action against most Gram-positive and Gram-negative bacteria.

Neomycin is especially recommended against diarrhoea caused by E. coli in piglets and lambs.

Scopolamine methylbromide shows an anti-cholinergic action, and blocks the hypermotility and hyper secretion of the intestines.

Consequently the antibiotic level remains high for a longer period, halting dehydration and prevents painful contractions of the intestines.

The combination of these two components ensures a good therapeutic action against piglet and lamb diarrhoea.

Administration/dosage:

Orally:

Piglets < 7 kg : 1 ml

Piglets 8-12 kg : 2 ml

Other animals : 1 ml per kg b.w.

Advised withdrawal times:

meat : 28 days

Conservation:

Cool (8-15°C), protected from light.

Presentation:

150 ml bottle, with or without pump.

430 ml refilling bottle.
