

Oxytocin

Composition:

Each ml solution contains:
10 IU synthetic oxytocin

Action:

Acceleration of delivery and, after parturition, promotion of expulsion of the placenta. Stimulation and increase of milk secretion.

Synthetic oxytocin has the same action as oxytocin from the hypophysis and pituitary lobe, but it is free from vasopressin thus avoiding unwanted side effects.

Indications:

Weak pain in the course of delivery, lactation failure in sows (mastitis,agalactia), uterus atonia, retentio secundinarum (placenta), involutio uteri, uterus prolapse.

Administration/dosage:

By intramuscular or subcutaneous injection:

Mare : 4-5 ml

Cow : 4-6 ml

Sow : 2-4 ml

Ewe, goat : 1-3 ml

Bitch : 0.5-1 ml

Cat : 0.3-0.5 ml

Advised withdrawal times:

milk : none.

meat : none

Conservation:

Cool (8 - 15°C), protected from light.

Presentation:

25 x 10 ml vial.

12 x 50 ml vial.
