

## **Vitamin-E-selene**

### **Composition:**

Each ml solution contains:  
100 mg vitamin E acetate  
1 mg sodium selenite

### **Action:**

Essential elements for a normal health and growth. Deficiencies are observed mainly in sows and newborn piglets. Problems after parturition in sows, agalactia, infertility, as well as paralysis, dermatological and muscular problems in piglets may be associated with deficiencies in Selenium and Vitamin E.

### **Indications:**

Muscular dystrophy in piglets, calves and lambs. Mulberry's heart disease in pigs. Weakness in newborn piglets. Deficiency in Vitamin E and Selenium.

### **Administration/dosage:**

By a single intramuscular injection:  
Preventive Curative
