

Alfatrim 24%

Composition:

Each ml solution contains:

40 mg trimethoprim

200 mg sulfamethoxazole

Action:

The combination of trimethoprim and sulfamethoxazole secures a synergistic bactericidal action against most Gram-positive and Gram-negative bacteria, including penicillinase producing ones. *Leptospira*, *Pseudomonas*, *Erysipelotrix* and *Mycobacterium* are not very sensitive. The two components affect the synthesis of purine and nucleic acids of the bacteria in a different way, resulting in a double blockade.

Indications:

All primary and secondary bacterial diseases in cattle, calves, pigs dogs and cats., such as respiratory, gastro-intestinal, genital and urinary infections, mastitis, wound infections, eye and ear infections.

Administration/dosage:

By intramuscular injection:

In general 1 ml per 20 kg b.w. twice daily during 5 days.

Advised withdrawal times:

meat : 10 days.

milk : 4 days.

Conservation:

Cool (8-15°C), protected from light.

Presentation:

Per 12 vials of 100 ml.
