

Injector CLA

Composition:

Each injector of 10 ml contains:
200 mg cloxacillin (as sodium salt)
75 mg ampicillin (as sodium salt)

Action:

Cloxacillin is a semi-synthetic broad-spectrum antibiotic with bactericidal activity against Staphylococcus (also against penicillin-resistant Staphylococcus), Streptococcus, C. pyogenes, E. coli and other Gram-negative bacteria in the udder.

Ampicillin is another broad-spectrum semi-synthetic benzylpenicillin, active against Streptococcus, penicillinase negative Staphylococcus, Clostridium, Haemophilus, Shigella, Salmonella, Listeria monocytogenes, Corynebacterium and Actinomyces. Also E. coli, Proteus mirabilis and Proteus vulgaris are sensitive.

Indication:

mastitis due to unknown organisms, or when presence is expected of both streptococci and staphylococci / E. coli.

Advised withdrawal times:

Do not use milk during 72 hours after administration.

Administration/dosage:

Clean and disinfect the nipple, one injector per quarter, three times with interval of 12 hours.

Contra-Indications:

Hypersensitivity to penicillins.

Conservation:

Dry, cool (8-15°C), protected from light.

Presentation:

Carton box with 4 injectors.
Bulk.
