

Injector Kanaclox

Composition:

Each injector of 10 ml contains:
500 mg cloxacillin benzathine
100 mg kanamycin sulphate

Action:

Cloxacillin is a semi-synthetic broad-spectrum antibiotic with bactericidal activity against Staphylococcus (also against penicillin-resistant Staphylococcus), Streptococcus, C. pyogenes, E. coli and other Gram-negative bacteria in the udder.

Kanamycin is active against Enterobacteriaceae (E. coli, Klebsiella, Proteus), Salmonella, Staphylococcus, and others.

Indication:

Prevention and treatment of mastitis, during dry period, due to unknown organisms, or when presence is expected of both Streptococci and Staphylococci and/or E. coli.

Advised withdrawal times:

meat: 28 days

milk: 4 days

If dry period is considerably less than 6 weeks, antibiotic residues may still be found in the milk.

Administration/dosage:

Clean and disinfect the nipple, one injector per quarter, in the beginning of the dry period.

Conservation:

Dry, cool (8-15°C), protected from light.

Presentation:

4 injectors per carton box.

Bulk.
