

## **Injector Kanamycin injector**

**Composition:**

Each injector of 5 g contains:

50 mg kanamycin sulphate

100 000 IU procaine benzylpenicillin

40 mg prednisolone acetate

**Indications:**

Mastitis caused by Staphylococcus, also the penicillinase-producing ones, and Streptococcus.

Owing to the synergistic and bactericidal action of this combination of antibiotics and the anti-phlogistic and anti-oedematic properties of prednisolone, this injector is especially suitable for the treatment of the toughest mastitis.

Otitis externa in dogs and cats

**Administration/dosage:**

Clean and disinfect the nipple, one injector per quarter. The treatment may be repeated after 24 hours.

**Advised withdrawal times:**

meat: 6 days

milk: 4 days

**Conservation:**

Dry, cool (8-15°C), protected from light.

**Presentation:**

4 injectors in one carton box.
