# Alfamisole 10%

### **Composition:**

Each ml solution contains: 100 mg levamisole base (as HCl).

### Action:

Levamisole demonstrates a broad spectrum activity in the removal of gastrointestinal and respiratory Nematodes. Levamisole has a paralyzing effect, with a rapid expulsion of living worms including the migrating larvae of Ascaris suum and Strongyloides. Worms expelled later are decomposed and may not be apparent in feces.

### Indications:

Infections caused by gastrointestinal and respiratory nematodes susceptible to levamisole.

Pigs: Ascaris suum and larva migrans, Strongyloides spp., Metastrongylus elongatus, Oesophagostonum dentatum, Trichuris suis and mature Stephanurus, Hyostrongylus rubidus.

Cattle: Dictyocaulus spp., Protostrongylus spp., Ascarides, Nematodirus spp., Strongyloides, Bunostonum spp., Oesophagostonum spp., Chabertina ovina, Strongyloides spp.

## Administration/dosage:

By a single intramuscular injection:

Cattle, sheep, goats, pigs: 1 ml per 20 kg body weight.

### Advised withdrawal times:

Milk: 48 hrs. Meat: 3 days.

### **Conservation:**

Cool (8-15°C), protected from light.

### Presentation:

Per 12 vials of 100 ml.

6 vials of 250 ml

6 vials of 500 ml
