

Antipyranal

Composition:

Each ml contains:

1 mg atropine sulphate.

Action:

Atropine is an alkaloid with an parasympatholytic activity.

Indications:

Pre-anaesthetic medication;

as a partial antidote in organophosphorous poisoning.

Administration/dosage:

Pre-anaesthetic medication: by subcutaneous injection.

Horse, cattle, pig, dog and cat: 0.03- 0.1 mg atropine sulphate per kg body weight.

As antidote: in all species 0.2-2 mg per kg body weight. In severely affected animals one third of this dose may be given very slowly intravenously in a dilute (2%) solution and the remainder by subcutaneous injection.

Contra-indications/Warnings:

Glaucoma;

do not use with other parasympatholytic agents.

Conservation:

Cool (8-15°C) and protected from light.

Presentation:

Per 12 vials of 50 ml.
