

Vitamin B complex Alfasan

Composition:

Each ml solution contains:

35 mg Vitamin B1

2 mcg Vitamin B12

0.5 mg Vitamin B2

23 mg Nicotinamide

7 mg Vitamin B6

70 mg Vitamin C

Action:

B-complex vitamins participate in the formation of enzymes and are indispensable for the metabolism of fats, proteins and carbohydrates and for normal growth of muscular and nervous tissue. Deficiency of B-complex vitamins results in retardation of growth and development, reduced fertility, changes in mucous membranes and skin, loss of hair. Deficiency is caused by a poor concentration of these vitamins in the feed, and is usually manifested in the course of gastro-intestinal diseases. Deficiencies of only one vitamin in this group is however rarely encountered, and even in such cases it is advisable to administer the whole complex in order to prevent possible deficiencies of other vitamins of the group.

Indications:

Prevention and treatment of anaemia, muscle weakness, obesity, sensibility disorders, neuritis, regeneration and treatment of mechanically impaired peripheral nerves, digestive problems (gastro-enteritis, diarrhoea, stomatitis), dermatological problems (eczema, pruritus, loss of hair), prevention or assistance in treatment of diseases.
